TITLE INDEX

Analysis of capital investment: A conceptual cash flow model, 277
Analysis of multi-item inventory systems under resource constraints: A non-linear goal programming approach, 121
Analytical Delphi Method (ADM): A strategic decision making model applied to location planning, 23
Application of a multiobjective electric power production costing model to the U.S. acid rain problem, 241

Chance constrained quality control, 165
Common cycle scheduling in a multistage production process, 73

Decision criteria on the branch-and-bound method for optimal single-level lot sizing with backlogging, 139
Decision support system for production control: Multiple criteria decision making in practice, 213
Decomposition strategy for multicriteria optimization with application to machine tool design, A, 191
Design for a comprehensive maintenance planning recording and optimization system, 37

Economic ordering policy during special discount periods for dynamic inventory problems under certainty, 101

Influence of inflation productivity calculations: A case study, The, 13
Inventory control problem and the optimal supply price: Micro theoretic, The, 51

Learning curves and production functions: An integration, 3

Manpower planning in the presence of learning, On, 295
Matching of sales plans and production schedules using a microcomputer, The, 29
Multi-objective, multi-period planning for a manufacturing plant, 113
Multicriteria design of ceramic piston crown, 175
Multiple criteria decision making in industrial project management, 231
Multiple criteria decision support system for production management, 203
Multiple machine replacement analysis, 265

New approach to the dynamic lot size model, A., 255
Nonlinear multiproduct CVP analysis with 0–1 mixed integer programming, 81

Optimization of spare parts in a multilevel maintenance system, 93

Production cost in the periphery: The case of Greece, 285
Productivity measurement through multi-criteria decision making, 151

Resource management and strategic decision making in industrial R&D departments: Decision support using judgmental modelling in the chemical industry, 219

Selection systems to support Computer-Integrated Manufacturing (CIM), 305
Simulation study of production inventory management in a mylar capacitor manufacturing company, 43
Stability of a two-stage production and inventory model, 65

Trade-off analysis of buffer stock versus emergency delivery in the knockdown production systems, 219
